PRODUCT BULLETIN

Product(s):	Julian
Bulletin Number:	086
Release Date:	9/14/99
Pages:	1

Subject: Bag arm - Julian

The bag arm for the Julian provides the user with the familiar fixed mounting position for the manual breathing bag. The arm pivots about its mounting allowing horizontal movement.
The arm is installed on the rail on the side of the machine. The height of the arm is fixed at time of installation.

The arm connects to the bag outlet on the breathing system with a short length of standard breathing hose.

The design of the arm maintains the flexibility of using the bag on the end of the hose if this is required.

Part number: 4116047
Price: $ 450.00

Availability: October 1999
